

# CONSERVATION SCRAMBLE

## DIRECTIONS

Farmers care for the land. Use the clues to help unscramble each word!

1. Farmers can grow plants in between rows or in an empty field. This keeps soil from washing or blowing away. It also adds nutrients!

EVCRO RPSOC \_\_\_\_\_

2. This is when you leave a field to rest. A crop is not planted on it. Native grasses often start to grow, which can provide habitat for wildlife.

LOFWAL ILFDE \_\_\_\_\_

3. You can grow one plant in your field this year, and a different plant next year. This helps the soil! Beans (legumes) add nutrients back into the soil. For example, farmers plant beans after corn to make the soil healthier.

PORC TOTRONIA \_\_\_\_\_

4. Farmers care for the land. This word means protecting and being responsible for something. (Merriam Webster)

WDSIPHEARST \_\_\_\_\_

5. Farmers work every day to help this. It includes the air, water, minerals and organisms around us.
