1. Farmers can grow plants in between rows or in an empty field. This keeps soil from washing or blowing away. It also adds nutrients!

**EVCRO RPSOC**

2. This is when you leave a field to rest. A crop is not planted on it. Native grasses often start to grow, which can provide habitat for wildlife.

**LOFWAL ILFDE**

3. You can grow one plant in your field this year, and a different plant next year. This helps the soil! Beans (legumes) add nutrients back into the soil. For example, farmers plant beans after corn to make the soil healthier.

**PORC TOTRONIA**

4. Farmers care for the land. This word means protecting and being responsible for something. (Merriam Webster)

**WDSIPHEARST**

5. Farmers work every day to help this. It includes the air, water, minerals and organisms around us.

**ETNEMRIVONN**
